8ft high**

secant piles

**Hali Road**

The image shows a construction site with a concrete retaining wall. The wall is made of several courses of concrete blocks. A row of steel piles is embedded in the wall, with their caps visible. The piles are numbered in green paint. A black box highlights the piles cap area. Another black box highlights the rebar for the second level basement. The ground in front of the wall is excavated, showing soil and some debris. In the background, there are buildings and trees.
